

Webinar: Using California Birth Information System (CBInfo) - Module 1

Module 1: "Getting Started: Installing the Software, Navigating CBInfo, and Importing the Data"

Date: Wednesday, January 26, 2011

Description:

CBInfo is a free software package developed by FHOP to improve access to and utilization of birth certificate data in a standard format that would allow comparisons within and across counties. CBInfo features include importing, reviewing, reporting, graphing, and mapping birth certificate data, as well as pre-programmed reports. The refresher modules are intended to highlight and review features of CBInfo. Similar to the face-to-face training, FHOP will walk through the steps and features of CBInfo during the webinar. We strongly encourage you to have completed a face-to-face CBInfo training or be familiar with the CBInfo Manual before watching these modules. More information about CBInfo, a link to download the program and the user manual are available [here](#). [1]

Training Objectives:

By the end of the session participants will be able to:

1. Install CBInfo
2. Navigate through the features of CBInfo
3. Import AVSS data files into CBInfo
