

Data Management

Methods ^[1]

The **METHODS** page has documents describing how we process data to maintain longitudinal consistency.

SAS Tools ^[2]

The **TOOLS** page focuses on useful SAS programs and macros.

SAS Resources ^[3]

The **RESOURCES** page provides some resources that are helpful to manage our studies.

SAS User Group ^[4]

FHOP has formed a group for SAS programmers who work with population health files such as hospital discharge, births, deaths, fetal deaths, census and other large files available longitudinally. The group is intended to provide peer support for SAS programmers, to facilitate discussion, ask questions and get answers.

Designers of FHOP's DataBook products lead the User Group. Participants will have access to their expertise. Members can submit data management or programming questions to the User Group and share resources. FHOP's large library of macros and other resources developed to study population health longitudinally are available through this group.
